

Medical Application

Zcomax Presents:

The RW-100 is the next step forward in the advancement of serial technology. Rather than having to plan serial implementations around preexisting lines or cabled areas, a wireless solution requires only that there be an available power source where the device is to be used and integrates easily with existing wireless infrastructures.

We invite you to take a look at this exciting development and how it can work for you. Available as an RS-232 ready serial server or just as an embedded module, the WS-120M.

Ease of Installation: The RW-100 is ready to deploy with a built-in RS-232 serial interface and external antenna connector. The WS-120M also features the same functionality and a U.FL antenna connector.

Scalability: As your company grows and more equipment is added, the RW-100 makes connectivity simple. There's no need for wiring or construction, just add another RW-100 to the equipment for easy installation and mobility options.

Security: The RW-100 and WS-120M are ready for your secure network with Integrated support for WPA security.

Please visit us at www.zcomax.com for more information and to view the specifications for both of these exciting models.
